ABSTRACT

This directory identifies and classifies AHEC-type (Area Health Education Centers) programs throughout the United States. (Although funding for some programs may have terminated, the information compiled is considered valid as of July 1, 1975.) The directory is divided into seven sections. The first six sections, which provide basic information about the developmental processes in the identification and classification of AHEC-type programs, are titled Overview, AHEC Literature Review, AHEC Methodology, AHEC Classifications, AHEC Site Visits, and Observations. The seventh section, covering the majority of the document, is titled Descriptive AHEC Program Inventory Data. Each program is entered by State and includes the program title, executive director, program address and telephone number, geographic area served, organizational structure, funding source, goals and purposes, participants, and classification. The appendixes present additional program information and are titled Identification and Comparison of Regional Medical Program Supported Health Services/Education Activities, AHEC Site Visit Protocol, AHEC-Type Programs Offering Clinical Education Activities by Major Category, AHEC-Type Programs Offering Continuing Education Activities by Major Category, and AHEC-Type Programs Offering Educational Development Activities by Major Category. A bibliography is included. (HD)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original.

The work upon which this publication is based was performed pursuant to Contract No. 231-75-0002 with the Bureau of Health Manpower, Health Resources Administration, Public Health Service, Department of Health, Education and Welfare. Any information provided herein does not necessarily represent the views of the Bureau of Health Manpower, Health Resources Administration, Public Health Service, or the Department of Health, Education and Welfare.

FOREWORD

The Area Health Education Center Directory represents the first attempt on the part of the federal government to systematically identify all known AHEC-type programs. It includes information on federal, state, local and privately funded programs in decentralized health professions education throughout the country.

The development of the area health education center concept was the result of recommendations made by the *Carnegie Commission Report on Higher Education and the Nation's Health* (1970) which concluded that "the crisis in the delivery of health care in the United States reflects the combined influences of five interrelated and overlapping factors: (1) unmet needs for health care, (2) rising expectations of the population for universal access to care, (3) critical shortages in, and inefficient utilization of health manpower, (4) ineffective financing; and, (5) rapidly rising costs".

By September 1972 eleven area health education centers had been funded through the National Institutes of Health under the Comprehensive Health Health Manpower Training Act of 1971 for the purpose of "improving the distribution, supply, quality, utilization and efficiency of health personnel and the health services delivery system . . .". In 1974 administrative responsibility for this program was transferred to the Bureau of Health Manpower (BHM), formerly the Bureau of Health Resources Development (BHRD). Since then the Bureau has maintained a leadership role in working with other federal, state and local agencies supporting AHEC-type activities to ensure an understanding of the dynamics of the total AHEC effort across the country.

In response therefore to wide spread interest in AHEC-type programs, this Directory was developed to serve as a guide for government agencies and other interested groups concerned with the existing void of AHEC-type activities in both rural and urban areas.

Additional copies of this document may be obtained through the Bureau of Health Manpower, NIH Building 31, Room 5C-33, 9000 Rockville Pike, Bethesda, Maryland 20014.

ACKNOWLEDGEMENTS

C. E. Pagan Associates, Inc. would like to express appreciation to the many people who have aided with their suggestions and ready cooperation in providing the information necessary to compile this Directory.

In addition, CEPA would like to acknowledge a special indebtedness to the following persons who participated in the classification development workshops and made a valuable contribution in determining the classifications.

Richard Kaplan

SECTION A: OVERVIEW

INTRODUCTION

The purpose of the Supplement to Area Health Education Centers: A Directory of Federal, State, Local and Private Decentralized Professional Health Education Programs is to set forth in detail the developmental processes implemented by C. E. Pagan Associates, Inc. in the identification and classification of AHEC-type programs throughout the country. In addition, this document includes detailed funding and program information on each of the AHEC-type projects identified. Although funding for some programs may have terminated the information compiled is considered valid as of July 1, 1975.

DEFINITION OF DECENTRALIZED HEALTH PROFESSIONAL EDUCATION

Decentralized health professional education represents a formal and considered approach to providing "new training opportunities and added health care capability in areas where they are currently scarce or do not exist".

The recognition and awareness that unmet health needs pose a serious problem nationally led the Carnegie Commission to recommend a series of alternatives geared towards increasing health manpower and its distribution in the United States.

PROBLEMS IN HEALTH CARE DELIVERY FOR WHICH DECENTRALIZED HEALTH PROFESSIONAL EDUCATION IS PROPOSED AS A SOLUTION

In its *Report on Higher Education and the Nation's Health,* (1970) the Carnegie Commission on Higher Education identified the following issues as being of greatest concern in providing better health care for all Americans:

Unmet health needs

Rising consumer expectations of health care

Insufficient health manpower

Ineffective financing

Rising health care costs

In order to meet national expectations for quality health care, the Commission recommended an increase in the enrollment of medical schools and the development of new schools to be combined with innovative curricular designed to provide scarce medical areas with outreach or extended physician manpower.

HISTORY OF THE CARNEGIE MODEL

As early as 1956, P.L. 84-911, the Health Amendments Act, provided for graduate training of public health personnel. In the early 60's various federal laws were passed providing for health manpower support, including the Manpower Development and Training Act, 1962; the Health Professionals Educational Assistance Act, 1963, ad its amendments of 1965; and the Health Manpower Act, 1968. Following the publication of the Carnegie Commission Report in 1970, the federal government prepared legislation which would respond to the recommendations of the Commission. Of major importance was the passage of the Comprehensive Health Manpower Training Act, Area Health Education Centers (AHECs) under Section 774(a) for the purpose of "improving the distribution, supply, quality, utilization, and efficiency of health personnel and the health services delivery system . . .". By September, 1972, eleven AHECs had been funded through the National Institutes of Health. In 1974, administrative responsibility for this program was transferred to the Bureau of Health Manpower (BHM), formerly the Bureau of Health Resources Development (BHRD).

The BHM AHEC programs have been funded for a five-year period. Conceived by the Carnegie Commission as satellites of the university medical science centers, the AHECs are located in or adjacent to medically underserved areas, providing continuing education for physicians, residency training programs in primary care, and support for undergraduate clinical instruction for medical and osteopathic students. In addition, similar services are provided to allied health professionals and students. See map included in the AHEC Directory for the geographical distribution of the Carnegie Commission's suggested 126 AHEC program locations.

Since the passage of the 1971 legislation other federal agencies as well as state, local and private organizations have responded to the Carnegie Commission Report by supporting AHEC-type programs. As of July 1, 1975, the Bureau of Health Manpower (BHM) was supporting 11 AHEC programs; the Veterans Administration (VA), 8 AHEC-type programs; the Regional Medical Program (RMP) 92 AHEC-type programs; and state, local, and private agencies were supporting 29 AHEC-type projects, 5 of which are statewide networks. The following maps indicate the geographical distribution of federally funded AHEC and AHEC-type programs.

SECTION B: AHEC LITERATURE REVIEW

STRUCTURE OF THE REVIEW

As an initial step in identifying the current programs and patterns of AHEC-type activities, a review of the literature was undertaken. The major emphasis of the review centered on obtaining:

1. An overview of published information on AHEC-type activities and their process of development.
2. Descriptive information on current AHEC-type programs and their locations.
3. Descriptions of any models or patterns of activity which might prove helpful in developing criteria for classifying the AHEC-type programs.

In conducting the literature review, C. E. Pagan Associates, Inc. examined over 800 articles and books on health manpower education and development. While most sources were helpful in understanding the context within which AHEC-type activities take place many references did not directly relate to the development of AHEC-type programs. Only those sources with a direct relation to AHEC-type activities were considered to have significant relevance. These are included in the accompanying bibliography.

A variety of sources were used to identify relevant materials, including computer searches, index searches, contacts with government agencies and professional societies, and contacts with AHEC-type programs themselves. The most fruitful means of identifying relevant materials were National Library of Medicine MEDLINE searches and direct contacts with AHEC programs.

A large body of the published material on AHEC and AHEC-type programs has not been mass distributed and is available only through AHEC-type programs, AHEC administrative channels, and the authors of the publications.

PROBLEMS OF ACCESS

The process of searching sources was complicated by the absence of categorizing systems which sort for AHEC specific citations. The volume of material pertaining to health professional education is vast and has not been indexed under topics which discriminate for material pertaining to AHEC development. Despite this difficulty CEPA has identified a large number of articles potentially relevant to AHEC and AHEC-type activities.

FINDINGS

An important part of any literature review is the determination of topics which have been omitted or which are inadequately treated. While the identification of omissions may not necessarily indicate that these issues are not being considered, it does indicate that information concerning them may be available only to those who are professionally concerned with these issues. Subjects not found in the literature generally have not entered the arena of public awareness and debate.

There is usually a lag between what is known in professional circles and policy discussions and what can be found in published form. This would also appear to be true of materials concerning AHEC activities. Discussions with program administrators, participants and planners have pointed out a wide awareness and expertise concerning area health education centers, only a portion of which is reflected in the literature.

Despite a widespread knowledge of AHEC activities and strong interest in the issues surrounding them, significant areas of interest do not appear widely in the published literature. For example:

1. Only a small number of the total AHEC-type programs have been treated in publications.
2. No treatment of non-federally funded programs was identified.
3. No description of AHEC-type programs on a nationwide basis is available.
4. Comparisons of the different kinds of AHEC-type programs are relatively few in number.
5. Analyses of modifications to the Carnegie concept have not been made for the full range of operational programs.
6. No systematic evaluation of the outcomes of AHEC-type activities has yet been made although some are currently in progress.

7. No systematic evaluation of the impact of AHEC-type activities on other components of the health delivery system (such as information services, patterns of service delivery, utilization of primary and ambulatory care facilities) has been undertaken. Initial efforts in this area are also in progress.

8. No major review of the literature on AHEC-type activities was identified.

The most prevalent form of publication on AHECs are descriptions of individual programs. These generally discuss the history of the program, the process of organizing community resources, and the development of specific training activities conducted either by the AHEC itself or by member institutions.

In reference to identifying models useful for classifying AHEC-type activities, there is much more diversity in the literature, inasmuch as numerous models are discussed.

The three most frequently discussed models are the Carnegie Commission model, the Regional Medical Program model, often referred to as the "Community Based Consortium" model, and the Veterans Administration model. It should be noted, however, that the models considered in the literature are not all inclusive and only partially reflect those which were identified in the process of gathering data on the full range of AHEC-type programs.

In a treatment of manpower distribution, D. A. Fenderson discusses a model which is exemplified by the eleven BHRD Contract AHECs. These contracts have been awarded to central university health science centers which in turn have developed twenty-seven satellite programs with local organizations at sites surrounding the central universities. For Fenderson, "linkage" is the key word, an important aspect of this model being the cooperative affiliations between local sites and the central health science center. "The center is a system or arrangement not a place, a system that links health service organizations and educational institutions in a way which serves the student, the practitioner and the community. The center is a regionalization of the influence and activity of the university health science center. It provides training opportunities and brings personnel into areas that are now underserved." (Fenderson, September, 1973)

The activities at the twenty-seven local organization sites have "as its nucleus a public or non-profit hospital, usually a community hospital or a consortium of hospitals, and in some cases a Veterans Administration Hospital. It has a written agreement with a school of medicine or a university health science center that provides effective supervision and guidance by the medical center for specified educational programs in the hospitals." (Fenderson, September, 1973)

However, even among these eleven contracts, Fenderson points out that there is diversity. For example, four of the contracts support statewide networks of activity. Fenderson further emphasizes that "other models of this concept have been supported by Regional Medical Programs and the Veterans Administration which emphasize linking arrangements between and among local provider institutions and educational resources, with or without the inclusion of a medical school." (Fenderson, September, 1973)

In a treatment of RMP funded Health Service and Education Activities (HSEA), George Holland discusses the "Community Based Consortium" model. "The Consortium was conceived as a comprehensive regional approach to effecting the recruitment, training, retraining and retention of Health Manpower . . . representation on the Board (of Directors) is given as equally as possible to health manpower workers, health care delivery institutions–agencies, educational institutions (and health consumers)." (Holland, August, 1974) This model emphasizes the active participation of local health care providers, local educational institutions and consumers in a cooperative organization. It does *not* include linkage with a central university.

While not entirely distinct from RMP and BHM models, G. V. Brindley does discuss a Veterans Administration model. This model may include both a central university or health science center, and a consortium of local providers, educational institutions and consumers, but its distinguishing characteristic is the inclusion of a Veterans Administration Hospital. This hospital serves as the clinical core for training and education programs. In conjunction with this core, satellite educational centers may also be established. Brindley emphasizes the possibility of developing a nationwide network of AHEC-type projects through utilization of the existing nationwide system of Veterans Administration Hospitals. (Brindley, 1973)

A variety of statewide models is also described. Charles White discusses a statewide network of "Community Based Consortia." While the individual consortia parallel the community based model, they are joined in a statewide organization with a central coordinating office. The central coordination is not supplied, however, through a central educational institution. (White, 1973)

There appears to be no general agreement on where the central coordination should be located. For instance, John H. Hogness advocates central coordination but perfers that this be carried out through a university. "Each region . . . or section of the Country should have a central office to coordinate . . . such an office would be located in an existing academic medical center." (Hogness, 1969)

Lawrence Miike in comparing the development of VA, RMP, and BHM models concludes, "the several AHECs undertaken by the federal government are examples of experiments testing one concept of how to improve our nation's health. Certainly, no one approach can expect to answer all the questions that our health delivery system presently poses." (Miike, 1974)

In view of the results of the AHEC study data very special emphasis should be given to the further observation that there are still more models of AHEC-type programs than those treated in the literature and no single model adequately describes the diversity of existing programs.

SECTION C: AHEC METHODOLOGY

METHODS OF DATA GATHERING

In order to develop an inventory of AHEC-type programs currently in operation, an extensive data gathering process was developed. This process was structured so that information retrieved would lend itself not only to identifying the programs, but would also describe their 1) organizational structure, 2) educational programs offered, 3) types and numbers of trainees involved, 4) funding and organizational support, 5) geographic area served, 6) inter-institutional relationships, and other aspects. Information on these topics aided in developing a classification system in which all identified AHEC-type programs could be categorized on the basis of current descriptive information.

Before gathering data it was necessary to develop a definition of the kind of activity to be identified. Through analysis of the literature and discussions with various program administrators and experts in the field the following working definition was formulated:

An AHEC-type Program (activity) is an organized effort of health manpower education and training primarily to increase the supply, or improve distribution and utilization of health manpower in shortage areas, usually through a consortium linking educational and clinical institutions, usually multi-disciplinary, and serving a defined geographical area.

Direct inquiries were made to federal, state and local agencies, national health organizations, hospital associations, consortium groups and knowledgeable individuals requesting information on the location of all AHEC-type programs of which they were aware.

At the federal level meetings were held with representatives of those agencies that provide financial support to AHEC-type programs: Bureau of Health Manpower (BHM), Regional Medical Program (RMP), and the Veterans Administration (VA). The Bureau of Health Manpower and the Veterans Administration provided information on their programs through their own central offices, while, the Regional Medical Program provided two lists for use in making contacts with their projects. One list identified RMP regional coordinators and directors, and another list identified the local Health Service/Education Activities (HS/EAs).

Additional contacts were made with the National Health Council, American Medical Association, American Association of Medical Colleges, American Society for Health Manpower and Training, American Public Health Association, American Association of Health Professions, Interuniversity Communications Council, Appalachian Regional Commission, American Association of Junior and Community Colleges, and the National Association of Health Manpower Education Systems. These organizations identified projects and provided descriptive materials and background information.

Inquiries were made to a variety of state agencies and organizations requesting information concerning any possible AHEC-type programs in their area. All Statewide Comprehensive Health Planning (CHP) agencies and some Areawide CHP agencies were contacted, as well as all State Departments of Education, and Health Careers Councils. Through these inquiries CEPA became aware of additional programs funded through nonfederal sources and verified the operations of federally funded programs of which it had been informed previously.

From the federal, national and state leads CEPA identified local AHEC-type programs, other local health programs, knowledgeable individuals, university contacts, professional health organizations, manpower organizations and planning agencies which had knowledge about AHEC-type activities at the local level. These local organizations and individuals were then contacted to request information concerning AHEC-type activities and affiliations in their areas.

Contacts at all levels, national, state and local provided information which was used to tentatively identify all AHEC-type programs across the country. Each program was then contacted requesting information required for the Directory.

Each program was asked to supply, at its own discretion, whatever information or documentation it felt best described its projects. This resulted in considerable variation of response. Materials were often voluminous and required careful perusal to extract the most useful and pertinent data. While this process was time consuming, it produced considerable benefits in terms of identifying new developments in the structures and activities of identified AHEC-type programs. By not standardizing responses at the outset, the programs were given an opportunity to supply comprehensive information and to indicate significant and sometimes unanticipated areas of activity. This approach, however, did require an individualized analysis of all materials received.

Each response was carefully examined to extract information on a variety of subjects. These included, but were not limited to:

Location

Date of Origin

Geographic Areas Served

Organizational Structure

Inter-Institutional Relationships

Funding Sources and Amounts

Goals and Objective

Participants or Members and the Nature of their Affiliations

All Program Activities

Participation of Members in Developing, Sponsoring or Operating Program Activities

Credentials Offered

Number of Trainees

Special Problems or Needs

Because of the diversity of reported information, a standardized format was developed to enter data for comparative purposes. Once information had been extracted, analyzed and entered in the standard format, it could be compared without resorting to the use of computerized techniques.

VERIFICATION OF THE DATA

To ensure accuracy and provide each program director with an opportunity to correct, revise, update or comment on the inventory data CEPA employed a data verification process. This process allowed each program to review its data within the framework of the standardized format.

Response to the verification process was good. Often information not originally provided during the initial data gathering was submitted in response to verification requests.

Generally, the initial data was verified as accurate, or requiring only minor revisions. In some cases verification materials indicated a need for significant revisions because of changes in program operations. These revisions were made and a final data page presentation was developed for each program.

Overall, the verification process operated to the advantage of the programs. Most program directors expressed pleasure at being included in the Directory and at having the opportunity to review the data prior to publication.

PROBLEMS ENCOUNTERED

As the data was generated, several problems became apparent. Because each program was requested to supply information at its own discretion there was no standard response form. Materials were often voluminous, sometimes exceeding 300 pages. This required lengthy examination of data to extract relevant information. In addition, conflicting program data (funding and program offerings) received from central and local sources differed from the information reported by the program itself. In instances where discrepancies could not be reconciled (these were few) the data supplied by the program itself was used in the verification process.

COMPARISON OF INVENTORY DATA TO RMP HS/EA LISTS

The CEPA Directory differs from lists of HSEA programs published by the Regional Medical Program in several significant respects. It should be noted that the CEPA list does not contradict the others. However, the CEPA Directory does include some programs not on the RMP List and also excludes some which are on the RMP List. Differences in the CEPA Directory from the RMP List include:

(1) The inclusion of three statewide resources in Minnesota that receive RMP funding to implement area HSEA programs but whose primary thrust is not HSEA activity (identified through the CEPA Inventory).

(2) The inclusion of programs claimed by both the VA and RMP.

(3) The inclusion of programs which state that they have AHEC-type activities and receive RMP financial support (identified through the CEPA Inventory).

(4) The inclusion of some former RMP HSEA programs whose funding has been assumed by another source.

(5) The exclusion of HSEA programs which have been discontinued.

In the process of organizing and reviewing the HSEA information it was discovered that many HSEA program names had been changed. HSEA program names used in the AHEC Directory have been documented through the data verification process.

In order to facilitate identification and comparison among the three sources of HSEA program identification (RMP List I, RMP List II, and the CEPA AHEC Directory), a chart has been developed. See Appendix A: "Identification and Comparison of Regional Medical Program Supported Health Services/Education Activities".

SECTION D: AHEC CLASSIFICATIONS

STRUCTURE

The scope of work for the AHEC contract stipulated that the contractor shall "Develop classifications for the various AHEC title projects such as, comprehensive, educational, coordinating, service oriented, etc., not to exceed a total of eight (8) unless approved in writing by the Project Officer." It was intended that these classifications provide a means of briefly describing the major kinds of programs identified through the Directory.

The initial step in developing classification criteria involved a review of the literature. The literature did not contain descriptions of the full range of AHEC-type programs. Neither did it contain many comparative studies of structure or programs. However, some models were discussed. These included the health science center or university based AHEC System, the "Community Based Consortium" model, the Veterans Administration Hospital model, and the Statewide Network.

After examining the data on actual programs, it was found that there was considerable diversity within projects which were, nominally, examples of these models. For instance, BHM AHEC programs frequently have community based organizations at the site level; RMP community based consrotia may be joined into statewide networks and may offer clinical training through member universities or colleges. Veterans Administration AHECs may or may not include health science center affiliations and frequently have community based structures. Furthermore, upon examining the educational activities of the programs, CEPA found that despite the major source of funding, there were numerous similarities between the kinds of activities conducted by individual BHM, VA, and RMP AHECs. For this reason it was necessary to develop descriptive criteria to differentiate among the programs on the basis of the total inventory data.

ADDITIONAL CONSULTANT INPUT

Based on an initial examination of the data, CEPA developed tentative criteria for differentiating programs. These were considerably modified in response to consultant recommendations. Before applying any criteria, a series of consultant workshops was held to gain the input of a broad spectrum of health profession education experts. These included officials in the various AHEC-type programs, academic experts in decentralized health professions education, representatives of national health organizations, and project directors of VA, RMP and BHM AHEC-type programs.

Prior to the workshops each consultant was sent background materials on the C. E. Pagan Associates contract; BHM AHEC, RMP and VA AHEC-type Program Guidelines, samples of current inventory data, etc.

It should be noted that each consultant workshop functioned independently of CEPA findings and of the other workshops. The consultants were *not* informed of CEPA developed criteria for differentiating AHECs nor of those developed in other workshops. This was done to avoid biasing their findings and to substantiate and put into perspective the findings of previous efforts. In general, the three workshops illustrated that there was considerable agreement on what comprised the significant differences among projects.

MATRIX DEVELOPMENT

As a result of the consultant workshops and other classification activities, C. E. Pagan Associates, Inc. developed the following list of elements to be considered in the classification system. These represent a combination of the items identified by the consultants and by C. E. Pagan Associates staff.

Program Activities

- Clinical Education (degree)
- Clinical Education (certificate)
- Clinical Education (academic credit)
- Residency Programs
- Clerkships and Preceptorships
- Multidisciplinary Programs

- Continuing Education (academic credit)
- Continuing Education (non credit)
- Public Consumer Education
- Technical Assistance
- Research Planning and Evaluation
- Provision or Development of Educational Resources or Information Services
- Recruitment and Retention Activities
- Coordinating Activities

Funding

- Bureau of Health Manpower (BHM)
- Veterans Administration (VA)
- Regional Medical Programs (RMP)
- State
- Local Government
- Private

Governance and Participation

- Central Educational Institution (Health Science Center)
- Local Educational Institutions
- Local Providers (or combination thereof)
- Membership in State or Regional Network

Stage of Development

- Planning
- Developmental
- Operational

A matrix including each of these elements was developed and each AHEC-type program was plotted on the matrix to indicate what elements the program included.

MATRIX PATTERNS

From the matrix several interesting patterns were observed. Some of these suggested that certain elements were not particularly useful for purposes of classification. The source of funding, for example, did not seem to relate to other elements in the matrix. Even in the case of programs including a university health science center, the consultants found that a variety of funding arrangements may be observed. Furthermore BHM, VA, and RMP funded programs often conduct similar activities.

In instances of single source funding there was some relationship between the funding source and program activities. However, multiple source funding is so common that as an overall pattern, source of funding did not uniformly determine program activities or organization.

Stage of development likewise did not appear to bear significant relation to other elements of structure and program activity. Operational programs do tend to have the widest range of program activity. However, in examining information on proposed activities or activities in the planning stage it became evident that as planning and developmental AHECs mature they too moved toward a wider range of program activity.

Whether or not a program is a member of a state or regional network also did not appear to bear a strong relation to other elements of structure or program activities. The project activities of programs not belonging to a network were very often similar to those of network members. In addition, there was considerable variation in the kinds of networks. These included multi-state networks, inter-state projects, statewide networks, and networks with a central university linkage. Thus, membership in a network may mean a variety of things and did not, of itself, indicate specific differences in program activities.

Certain elements, however, did appear to be related and formed a basis for classification.

Program activities tended to cluster into three kinds: clinical education, continuing education, and educational development activities. Clinical Education refers to any training or academic instruction which leads to the attainment of a degree, certificate or license in a health profession. This includes both courses offered in an academic setting and courses offered outside academic settings which fulfill the requirements for a degree or certificate. Also included are residencies and clinical placements or preceptorships. Continuing Education refers to any training or course work offered to health professionals to improve or expand their skills. Such training generally does not lead to the attainment of a degree or certificate. Educational/Development refers to a wide range of education related activities which are not training per se, but which are directed twoard improving educational programs, resources, or the availability and accessibility of same. This includes public or consumer education, counseling, recruitment and retention activities, educational research, planning or evaluation, development of information services, technical assistance to educational programs, administrative and managerial assistance, coordination of educational resources and programs, and other related activities.

Generally speaking the program activities reported in the inventory data fall into these three categories. Some programs conduct only educational development activities. Others conduct only continuing or clinical education programs. Still others conduct a combination of some or all of these activities. An important observation is that these three kinds of project activities do appear to cluster into groups. While it is possible that a program may conduct all three kinds, the inclusion of one kind does not necessarily indicate that the other activities will be present. Many programs do offer continuing education but do not offer clinical education. Others conduct educational development activities but do not offer clinical or continuing education. However, programs generally do not conduct only one kind of educational development activity. If a program conducts activities in curriculum development, for instance, it also is likely to be involved in other educational development activities such as coordination or recruitment, etc. These three kinds of project activity represent the major emphasis in the programs which have been examined.

Organizational structures and inter-institutional affiliations also indicated specific conceptual patterns. While a wide range of individual arrangements were observed, two major patterns appeared to occur most frequently. These are similar to the "Carnegie Consortium" and "Community Based Consortium" models.

A significant number of programs fall into the first (Carnegie Consortium) pattern. These programs include a medical school or university health sciences center with linkages to one or more programs at the local level. At the local level the individual programs or sites are organized into consortia or cooperatively affiliated groups of local provider and/or educational institutions.

The second frequently occurring pattern (Community Based Consortium) does not include linkages to a medical school or health sciences center. It is generally a consortium or cooperatively affiliated group of local providers and educational institutions. These consortia may or may not be further affiliated into networks, but their core organizational structure is still that of a consortium.

CLASSIFICATIONS

Based on the data processed, C. E. Pagan Associates observed five major elements which were included in the classification systems. These are:

Program Activities

1. Clinical Education
2. Continuing Education
3. Educational Development

Inter-Institutional Affiliations

4. Consortium of local health care providers and educational institutions with linkage to a medical school or university health sciences center (Carnegie Model Consortium)
5. Consortium of local health care providers and educational institutions (Community Based)

These five major elements can form fourteen different combinations, which is more than the desired number of classes. However, not all of the possible combinations represented the types of programs which were actually found in the data. Eight of the combinations do occur and comprise the following eight classifications.

A. Carnegie Model Consortium, Comprehensive Program

(including clinical, continuing and educational development activities)

B. Carnegie Model Consortium, Continuing Education and Educational Development Program

(excluding clinical education)

C. Carnegie Model Consortium, Clinical Education and Educational Development Program

(excluding continuing education)

D. Community Based Consortium, Comprehensive Program

(including clinical, continuing and educational development activities)

E. Community Based Consortium, Continuing Education Program

(excluding educational development and clinical education)

F. Community Based Consortium, Educational Development Program

(excluding continuing and clinical education)

G. Community Based Consortium, Continuing Education and Educational Development Program

(excluding clinical education)

H. Community Based Consortium, Clinical Education and Educational Development Program

(excluding continuing education)

These eight classifications are representative of the major kinds of programs found in the inventory data. Definitions of the five elements which comprise these classifications are as follows:

1. Carnegie Model Consortium

   A consortium of health care providers and educational institutions with linkage to a central medical school or university health science center which provides central coordination and is responsible for developing cooperative educational programs with and among institutions at the local level.

2. Community Based Consortium

   A health manpower education consortium of local health care providers and educational institutions which is responsible for coordinating and developing cooperative educational programs among institutions at the local level. Such a consortium may include universities, colleges or medical schools within the local area but no single institution has central responsibility for program direction.

3. Clinical Education

   Any training or academic instruction which leads to the attainment of a degree, certificate or license in a health profession. This includes both courses offered in an academic setting and courses offered outside academic settings which fulfill the requirements for a degree or certificate. Also included are residencies and clinical placements or preceptorships.

4. Continuing Education

   Any training, course work or instruction offered to health professionals to improve or expand their skills. Such training generally does not lead to the attainment of a degree or certificate.

5. Educational Development Activities

   Such activities include a wide range of education related activities which are not training per se, but which are directed toward improving educational programs or resources or the availability and accessibility of same. This includes public or consumer education, counseling, recruitment and retention activities, educational research, planning or evaluation, development of information services, technical assistance to educational programs, administrative and managerial assistance, coordination of educational resources and programs, and other related activities.

CLASSIFICATION VERIFICATION

All classification assignments were subjected to a classification verification process which paralleled the data verification process. In the event that the program director desired to change his assigned classification, he was asked to supply supplementary or revised information.

As mentioned earlier, response to the verification process was good. Often, information not originally provided during the data gathering process was submitted during the verification process. This information frequently gave further details on program operations but usually did not affect the program's classification. In some instances new data did justify a change in classification assignment and a modification in the classification system only. CEPA found that a review of the completed and verified inventory data revealed that no AHEC-type program had been classified as a Carnegie Model Consortium, Clinical and Continuing Education Program (excluding educational development activities) and thus was subsequently omitted from the system; however, one program was classified as Community Based Consortium, Clinical Education and Educational Development Program (excluding continuing education), creating a new classification category which has been included within the AHEC classification system.

Verification procedures have allowed all AHEC-type programs to have input into the classification system. A number of programs chose to comment on the eight preliminary categories. In almost all instances the project directors felt that the classification system was adequate and that one of the categories was appropriate to their program. In some instances programs preferred a different classification and indicated which one they felt appropriate. Many programs expressed pleasure at being given the opportunity to verify the classification and many provided new information to justify reclassification.

The following charts indicate the number of AHEC-type Programs listed in the Directory by Classification and State Location.

**Excluding the additional AHEC-type programs tentatively identified in Washington.

**Washington*

Four additional AHEC-type programs were tentatively identified in Washington, however, three of the four programs provided insufficient information for proper classification and one program is in the developmental phase.

SECTION E: AHEC SITE VISITS

STRUCTURE

The purpose of the AHEC site visits was threefold: 1) to perform on-site verification of the information supplied by the programs themselves; 2) to gain additional insight into program operations; and 3) to test the classification system for accuracy in describing operating programs.

In order to facilitate this endeavor, two programs from within each of the original eight classifications were chosen as representatives of their specific type. The selection process took into consideration regional representation, funding level source(s), current developmental status, program options, and the availability of AHEC program staff to host the consultants within the restrictions of the overall site visit schedule.

CARNEGIE MODEL CONSORTIUM, COMPREHENSIVE PROGRAM

AHEC Programs of North Carolina, Inc.
University of North Carolina at Chapel Hill
Chapel Hill, North Carolina

Southeast Area Health Education Center, Inc.
921 E. Third Street
Chattanooga, Tennessee

CARNEGIE MODEL CONSORTIUM, CLINICAL AND CONTINUING EDUCATION PROGRAM (This classification was found to be non-related to any identified AHEC-type program)

*Central Alabama Area Health Education Center
Veterans Administration Hospital
Tuskegee, Alabama

*Area Health Education Consortium of Treasure Valley, Inc.
5th and Fort Streets
Boise, Idaho

CARNEGIE MODEL CONSORTIUM, CONTINUING EDUCATION AND EDUCATIONAL DEVELOPMENT PROGRAM

University of Tennessee Area Health Education Center
1924 Alcoa Highway
Knoxville, Tennessee

---

*As a result of the site visits, both programs were re-classified under Community Based Consortium, Comprehensive Program.

North Carolina Health Manpower Development Program
136 E. Rosemary Street
Chapel Hill, North Carolina

CARNEGIE MODEL CONSORTIUM, CLINICAL EDUCATION AND EDUCATIONAL DEVELOPMENT PROGRAM

Allied Health Consortium of Greater Queens
150-14 Jamaica Avenue
Jamaica, New York

Area Health Education Center, University of Arkansas
Central Coordinating Unit
4301 Mark Road
Little Rock, Arkansas

COMMUNITY BASED CONSORTIUM, COMPREHENSIVE PROGRAM

Area Health Education Consortium of Southeast Nebraska, Inc.
Veterans Administration Hospital
Lincoln, Nebraska

Area Health Education Network
157 W. Cedar Street
Akron, Ohio

COMMUNITY BASED CONSORTIUM, CONTINUING EDUCATION PROGRAM

Southeast Idaho Center for Health Resources, Inc.
Idaho State University
Pocatello, Idaho

Nevada Education and Training Organization for Health, Inc.
2865 Idlewilde Drive
Reno, Nevada

COMMUNITY BASED CONSORTIUM, EDUCATIONAL DEVELOPMENT PROGRAM

Health and Education Council, Inc.
Essex Community College
Baltimore, Maryland

Rhode Island Health Science Education Council, Inc.
1145 Reservoir Avenue
Cranston, Rhode Island

COMMUNITY BASED CONSORTIUM, CONTINUING EDUCATION AND EDUCATIONAL DEVELOPMENT PROGRAM

Consortium of Health Manpower Programs
607 N. Grand Boulevard
St. Louis, Missouri

Dallas Area Hospital Television System, Inc.
5323 Harry Hines Blvd.
Dallas, Texas

COMMUNITY BASED CONSORTIUM, CLINICAL EDUCATION AND EDUCATIONAL DEVELOPMENT PROGRAM

This classification category was found to be valid only after the completion of the site visits and was therefore not included in the on-site verification process.

PROTOCOL

For each site visit a protocol was developed which included identification of key contact persons at the AHEC site, and the development of an outline of topics most relevant to the individual AHEC. Based on already gathered data, questions concerning management and administration, program operations, community relations, organizations, inter-institutional affiliations, fiscal matters, educational activities, stage of development, etc. were formulated. All of the original data, site visit topics and questions were discussed in depth with appropriate contact persons at the AHEC sites. See Appendix B, "AHEC Site Visit Protocol".

IMPLICATIONS FOR CLASSIFICATION

All AHEC data was reviewed with the program directors and generally found to be accurate. In some instances additional information was supplied. In these cases some revisions were required. It should be noted that nearly all programs that had already returned their verification material is required no revisions in either the data or the classifications. In some instances scheduling required that the site visit be made prior to completion of data verification. In these cases new information was provided which justified a classification change in five of the sixteen sites visited. In these five programs all of the changes were easily accommodated by the classification system. For instance, the Area Health Education Network of Akron, Ohio provided new information on degree programs for radiological technicians and respiratory therapists which allowed a classification change from "Continuing Education and Educational Development Program" to "Comprehensive Program." As another example, the Area Health Education Consortium of Treasure Valley and the Central Alabama Area Health Education Center were re-classified under Community Based Consortium, Comprehensive Program as a result of information clarified.

SECTION F: OBSERVATIONS

TRENDS IN THE DATA

A total of 140 operational Area Health Education Center-type Programs were identified in the inventory data. These are located in 38 states throughout the Nation. Overall no large portion of the country is without AHEC-type activities. New England, the Mid-Atlantic, Southern, Midwestern, Southwestern and Northwestern areas all have significant AHEC activities. Individual states or counties may not be involved directly in AHEC programs, but still no major portion of the country has failed to implement decentralized programs in health professional education.

Of these 140 projects approximately 28% conduct at least one degree granting program. However, continuing education is a more common program offering. Approximately 80% of all projects have continuing education offerings. Often this is the major programmatic emphasis. Offerings vary a great deal based on local perceptions of need for specific continuing education courses and some programs have more extensive courses then others. Of the specific identified course offerings most are non-credit continuing education courses. Less than one fifth of the specific courses listed have continuing education credits.

A significant number of programs conduct consumer education activities and the vast majority include consumer participation in the program's decision making structure. This is accomplished either through advisory committees or through voting membership on the board of directors.

Almost all programs conduct educational development activities in one form or another. Coordination, planning, curriculum development etc. are frequent activities. The specific activity undertaken varies, once again, with local perceptions of need, but overall, programs are heavily involved in coordination and development of inter-institutional education systems. This involvement is the most frequently identified activity, cutting across other distinctions between programs.

In almost every instance AHEC-type programs are comprised of a coalition of educational and health service institutions which is directed at restructuring the relationship between the institutions to form cooperative linkages and make more efficient use of health educational resources.

Funds to support AHEC-type activities come from a wide variety of federal, state, local and private sources. Over half of all AHEC-type programs identified have multiple source funding. In a significant number of cases this includes funds from participating institutions and other local sources. In a notable number of cases the majority of funds are contributed by state government. However, relatively few programs are entirely independent of federal funding and even fewer have exclusively local funding sources. Any reduction in federal funding will affect a large number of the programs identified.

In most instances AHEC-type programs serve a multi-county area but there is considerable diversity. Some programs serve as statewide or interstate resources while others may be limited to a single urban area. It should be noted, however, that the overall emphasis of the programs identified is on rural areas. Relatively few programs have strong emphasis on urban shortage areas while the vast majority concentrate on extending health manpower education into rural or sparsely populated areas.

MAGNITUDE OF AHEC ACTIVITIES

As is indicated by the volume of inventory data concerning program activities, the magnitude of AHEC activities is great. Continuing and clinical education programs encompass nearly all health specialties from physicians and technicians to planners and administrators. These courses reach a large number of trainees who would otherwise have limited access to educational programs and who are now receiving training in new and more appropriate locations. There is strong emphasis on clinical site training and there appears to be increased inter-specialty contact among involved professionals.

The large number of programs distributed over a thirty-eight state area is another indication of the magnitude of AHEC activities which reach into a broad range of communities and involve persons who might otherwise have had little input into the educational system. Often consumers and service providers, as well as educators have strong involvement in the planning and development of program offerings and frequently their commitment extends to partial financial support of program activities.

INTEREST IN AHEC ACTIVITIES

Throughout the process of compiling the AHEC Directory, CEPA has received numerous comments and inquiries concerning AHEC activities. Participating institutions have been quick to register their support of local programs and have praised individual programs not only for specific course offerings but especially for what is perceived to be a new atmosphere of trust, cooperation and improved communications among local institutions. This has been directly ascribed to the influence of AHEC-type programs. Favorable comments have come from not only educators but also from the full range of administrators, practicing health service providers, and private individuals.

In gathering data from state and local sources it was evident that AHEC-type programs were in no way obscure programs. Planning, administrative, governmental, hospital, and educational representatives were well aware of both the programs' activities and of their influence on the entire health sector. Representatives at the federal level have frequently commented on the extensiveness of AHEC activities and have expressed strong concern that activity should continue at a level which will allow the long range objectives of the programs to be fully accomplished.

CEPA has received many requests for copies of the final AHEC Directory from both local and federal agencies and from a large number of the AHEC-type programs themselves. It is expected that this data will serve as a useful source of comparative information on the full spectrum of AHEC activities and will assist in gaining insight into the process of developing new approaches to decentralized professional health education.

SECTION G: DESCRIPTIVE AHEC PROGRAM INVENTORY DATA

DESCRIPTION OF AHEC PROGRAM ACTIVITIES BY MAJOR CATEGORY

In general, AHEC and AHEC-type programs carry out a wide and diversified range of program activities within the three major component areas: clinical education, continuing education, and educational development. Because these activities are multi-dimensional and ever expanding, CEPA reviewed all program activities information received and developed major categories within each of the component areas. Appendix C. - Charts 1, 2, 3, indicate all AHEC-type programs offering component area activities by major category. The following charts indicate the total number of AHEC programs offering specific component area activities by major category.

NUMBER OF AHEC-TYPE PROGRAMS OFFERING CLINICAL EDUCATION ACTIVITIES BY MAJOR CATEGORY

Clinical Placements	27
Preceptorships	
Internships	
Residencies	
Externships	
Clerkships	
Rotations	8
3rd and 4th Year Electives for Medical Students in a Variety of Medical Areas	6
1 and 2 Year Allied Health Degree Programs	27
3 and 4 Year Allied Health Degree Programs	18
Allied Health Certificate/Diploma Programs	14
Postgraduate Allied Health Degree Programs	6
Family Nurse/Practitioner and/or Physician Assistant/Associate Program	8
Medical Degree Programs (Undergraduate and Graduate)	6
Total Number of AHEC-Type Programs Offering Clinical Education Activities	50

NUMBER OF AHEC-TYPE PROGRAMS OFFERING CONTINUING EDUCATION ACTIVITIES BY MAJOR CATEGORY

Health Care Administration/Leadership/Management/Supervision/Staff Development	35
Nursing and/or Physician Medical Education	74
Communications and/or Human Relations/Reality Orientation/Motivation/Etc.	19
Patient Care/Planning/Education	17
Legal Implications to Health Care	14
Health Care and the Law	
Patient Care and the Law	
Legal Aspects of Nursing	
Health Facilities and the Law	
Federal/State/Local Regulations	
OSHA	
Others	
Other Medical Oriented Course Offerings	76
Pharmacology/Narcotic/Drug Abuse	
Dentistry	
Cardiovascular/Coronary/Stroke/Hypertension	
Medical/Laboratory Technology	
Nutrition/Diatetics	
Gerontology	
Diabetes	

NUMBER OF AHEC-TYPE PROGRAMS OFFERING CONTINUING EDUCATION ACTIVITIES BY MAJOR CATEGORY–Continued

OB/GYN-Pediatrics	
Physical Therapy	
Respiratory Therapy	
Death and Dying	
Others	
Other Non-Medical Oriented Course Offerings	52
Maintenance and Housekeeping	
Electrical Safety	
Medical Nursing Audits	
Medical Records Procedures	
Others	
Total Number of AHEC-Type Programs Offering Continuing Education Activities	119

NUMBER OF AHEC-TYPE PROGRAMS OFFERING EDUCATIONAL DEVELOPMENT ACTIVITIES BY MAJOR CATEGORY

In-Service Education/Training Programs	21
Recruitment and/or Career Development	32
Minority recruitment programs	
Development of career upward mobility programs for students and allied health professionals	
Development and implementation of health career counseling programs	
Development of health career education programs, including health fairs and statewide health career occupation handbooks	
Referral mechanism for medical school entry	
Others	
Communications and/or Information Services	65
Production and/or distribution of audio visual materials	
Development and implementation of a communications network via monthly newsletter, calendars, radio and T.V., presentations/appearances	
Development of a centralized learning resource center	
Others	
Articulation Activities	48
Coordination and/or Consultant Activities	80
Consultant activities with local and regional health oriented groups/agencies/institutions; i.e. assisting community health groups in planning and conducting workshops and conferences; assist in the preparation of health oriented proposals	

NUMBER OF AHEC-TYPE PROGRAMS OFFERING EDUCATIONAL DEVELOPMENT ACTIVITIES BY MAJOR CATEGORY–Continued

Coordination of activities, programs, courses, etc., with other health related institutions	
Others	
Resource Development	66
Consumer Education	26
Program Planning, Development/Evaluation/Surveys/Studies, etc.	100
Health education development planning	
Development of inventories on area health care resources, etc.	
Development of task analyses studies for various allied health occupations, etc.	
Evaluation	
Development of local and regional health manpower surveys/studies (needs and projections)	
Program planning and development for specific health oriented courses or training programs; i.e., clinical and continuing education - applicable where course articulation activity is not specifically stated or implied	
Others	
Total Number of AHEC-Type Programs Offering Educational Development Activities	134

AHEC PROGRAM INVENTORY DATA PRESENTATION

The following AHEC Program Inventory Data presents detailed and unified information on each of the AHEC-type Programs identified in Volume 1: *Area Health Education Centers: A Directory of Federal, State, Local and Private Decentralized Professional Health Education Programs.*

GOALS AND PURPOSES

- To promote the cooperation of area hospitals and community agencies to develop the sharing of scarce health care resources, and to establish more effective health care delivery systems with special emphasis on primary care components.
- To encourage the coordination of academic and clinical education programs for health care personnel in area universities, colleges, vocational schools, hospitals, and other agencies, and to coordinate health career opportunities information programs.
- To establish, promote, assist, and/or further develop health care programs or activities with health science centers and other organizations, institutions, and agencies.
- To develop, promote, and coordinate continuing education programs for community and area health care personnel.
- To develop and maintain up-dated inventories of community and area health care resources and needs for effective planning, training, introduction and acceptance of health manpower and delivery systems at the community level.
- To initiate and/or promote and support health education programs for area residents, with special emphasis on disease prevention, health maintenance, and the early detection and treatment of illness.

ARKANSAS

AREA HEALTH EDUCATION CENTER PROGRAM

University of Arkansas Medical Center
4301 West Mark Road
Little Rock, Arkansas 72201

Winston K. Shorey, M.D., Director

REGION: VI

CLASSIFICATION: Carnegie Model Consortium, Clinical Education and Educational Development Program

DATE OF ORIGIN: July, 1974

HEALTH SCIENCE CENTER: University of Arkansas
Medical Center
Little Rock, Arkansas

GEOGRAPHIC AREA SERVED

Statewide

ORGANIZATIONAL STRUCTURE

An extension of the University of Arkansas Medical Center, but semi-autonomous. Program serves as the CENTRAL COORDINATING UNIT FOR 5 AHECs in the State of Arkansas.

FUNDING SOURCE	AMOUNT	1972	1973	1974	1975	1976	1977
State appropriated funds through the University System				1,000,000	1,250,000	1,445,000	1,583,750

GOALS AND PURPOSES

Operation of family practice residency programs, a program for senior medical students, training of residents other than those in family practice, allied health and other health professions along with a continuing professional education program.

PARTICIPANTS

–None

AREA HEALTH EDUCATION CENTER PROGRAM
CENTRAL COORDINATING UNIT

MAJOR CLINICAL EDUCATION CATEGORIES

Coordination of Clinical Placements: Family Practice Residency Programs

4th Year Electives for Medical Students

MAJOR EDUCATIONAL DEVELOPMENT CATEGORIES

Provides central coordination for 5 AHECs in Arkansas State Network (See Narrative)

NARRATIVE

The major expansion in the number of physicians to be initiated by the University of Arkansas for Health Sciences is dependent upon the AHEC Program for providing a very significant portion of medical student education and a major portion of residency training, particularly in Family Practice. Accomplishment of this requires that planning, development and operation of the AHECs be supervised by a central coordination and administrative unit that knows and understands both: 1) the educational requirements and problems at the UAMC; and 2) the resources and capabilities within the AHECs. It is the responsibility of the Central AHEC Coordination and Administrative Unit to organize and operate the total AHEC Program in such a manner that the educational resources and unique capabilities within the AHECs complement and strengthen the expanding volume of educational responsibility being undertaken at the Medical Center.

EL DORADO AREA HEALTH EDUCATION CENTER

CENTRAL SAN JOAQUIN VALLEY AREA HEALTH EDUCATION CENTER

University of California, San Francisco School of Medicine
Third & Parnassus
San Francisco, California 94143

Dr. Malcolm S. M. Watts, Director
Dr. Gildon Beall, Associate Project Director, UCLA

REGION: IX

CLASSIFICATION: Carnegie Model Consortium, Comprehensive Program

DATE OF ORIGIN: October 30, 1972

HEALTH SCIENCE CENTER: University of California
Los Angeles School of Medicine

CENTRAL SAN JOAQUIN VALLEY AREA HEALTH EDUCATION CENTER–Continued

TELEPHONE: (415) 666-2342

GEOGRAPHIC AREA SERVED

Fresno, Kings, Madera, Mariposa, Merced and Tulare counties

ORGANIZATIONAL STRUCTURE

Contract from NIH, BHM with University of California. Formal agreement with the deans of the two medical schools and the president of San Joaquin Valley Health Consortium, (SJVHC). SJVHC and its standing committees serve as the local advisory group.

FUNDING SOURCE	AMOUNT	1972	1973	1974	1975	1976
BHM		1,050,644	1,137,519	1,423,075	1,594,411	1,594,411

GOALS AND PURPOSES

1. Link the University of California with *institutions* in the Central San Joaquin Valley through active participation in the Area Health Education Center.
2. Develop mechanisms to enhance health manpower education and training through the formation of organizations involving professionals, community groups, voluntary agencies, planning bodies, educational institutions and clinical facilities in the Central San Joaquin Valley AHEC.
3. Develop programs to recruit and train health manpower for underserved and rural areas. Augment minority recruitment into health field.
4. Promote appropriate changes in health services through education and demonstration training programs which will serve the needs of institutions and rural and underserved communities.
5. Educate health professionals in provision of primary health services and family care utilizing optimal team approaches.
6. Establish a process by which health professions can develop their own criteria for patient care, to set community standards for quality of care and identify pertinent needs for continuing education and modifications.
7. Examine the functional relationships of members of the health care teams in a variety of patient care settings and have these analyses serve as a basis for continuing education and appropriate changes in basic training of health professionals.
8. Establish a more flexible curriculum for allied health professions by developing a core curriculum which includes basic courses in science, patient care and communication, and suitable clinical experience.
9. Provide on-going assessment of health manpower patterns and needs in the Central San Joaquin Valley and proximate rural areas to guide planning and program development.

*Contribution comes from hospital as a member of the Consortium.

GOALS AND PURPOSES

- Facilitate and forward the design of curricula for health careers education.
- Establish liaison with one or more universities, colleges, or health science centers for formal involvement of area hospitals and other clinical resources and health care personnel for the Treasure Valley region in 1) resident clinical training of physicians; 2) the training of medical, dental, nursing and allied health students and graduates; and 3) informal support of or affiliations for continuing education of health professionals.
- Coordinate, expand, and improve existing health education and training programs.
- Develop and evaluate traditional and new health careers and recruit local and other appropriate persons for needed health occupations.
- Promote a professionally attractive environment for the recruitment and retention of health manpower in regional communities which are currently underserved.
- Identify problems for study concerning the improvements of programs for continuing education and training in health careers.
- Support health education activities and programs for the general public.

UNIVERSITY OF ILLINOIS AREA HEALTH EDUCATION SYSTEM

College of Medicine
808 S. Wood Street
Room 169-S
Chicago, Illinois 60612

Thomas F. Zimmerman, Ph.D., Project Director

TELEPHONE: (312) 996-6695
996-8825

REGION: V

CLASSIFICATION: Carnegie Model Consortium, Comprehensive Program

DATE OF ORIGIN: 1972

HEALTH SCIENCE CENTER: University of Illinois College of Medicine
Chicago, Illinois

GEOGRAPHIC AREA SERVED

The AHES target area includes fifty counties divided into four regional planning areas and serves approximately 78% of the total Illinois population. Rockford Region 1-A: Boone, Caroll, De Kalb, Jo Daviess, Lee, Ogle, Stephenson, Whiteside and Winnebago counties. Peoria Region 1-B: Bureau, Fulton, Henderson, Henry, Knox, La Salle, McDonough, Marshall, Mercer, Peoria, Putnam, Rock Island, Stark, Tazewell, Warren and Woodford counties. Chicago Region 2: Cook, Du Page, Grundy, Kane, Kankakee, Kendall, Lake, McHenry and Will counties. Urbana-Champaign Region 3-B: Champaign, Clark, Coles, Cimberland, Dewitt, Douglas, Edgar, Ford, Iroquoise, Livingston, McLean, Macon, Moultrie, Piatt, Shelby and Vermillion counties

ORGANIZATIONAL STRUCTURE

Three regional medical schools, the organization of the Metropolitan Group of Hospitals, and their clinical affiliate networks form the nucleus for intra-regional planning through AHES, and provide the administrative focus and geographic orientation of the AHEC contract.

FUNDING SOURCE	AMOUNT	1972	1973	1974	1975
BHM		948,291	1,034,721	2,518,750	2,518,750

GOALS AND OBJECTIVES

To establish basic, graduate and continuing education experiences and programs for the health professions in geographic settings remote from the university health science campus. It is an initiative of the university which requires the active participation of the new regional or community setting, its leadership, its health care facilities, and its practitioners. Through interinstitutional collaboration, it is the AHES' intent to attain a new level of educational and profession capability, thus increasing the communities' ability to attract, produce and retain needed numbers and types of health manpower.

PARTICIPANTS

Rockford School of Medicine
Chicago Metropolitan Group of Hospitals

Cass, Crow Wing, Wadena, Todd, Morrison, Mille Lacs, Kanabec, Pope, Stearns, Benton, Sherburne, Isati, Chisago and Wright counties (Area D-Central Minnesota, October 1, 1973 - June 30, 1975; thereafter will serve all of Minnesota)

ORGANIZATIONAL STRUCTURE

The AHEC is under the direction of the Vice President for Health Sciences Affairs, University of Minnesota.

FUNDING SOURCE	AMOUNT	1972	1973	1974	1975	1976
BHM		439,333 (13 mo)	393,681 (8 mo)	784,714 (12 mo)	790,065 (12 mo)	998,571 Request (15 mo)

GOALS AND PURPOSES

To create the management capability necessary to carry out the purpose of the project; to determine the health manpower needs of the area to be served in terms that closely relate the supply, distribution and utilization to the health service needs of the area; to provide for the training of needed health manpower appropriate to the health service requirements; to create a training and working environment of such quality that health personnel are attracted to and retained in the areas of need; to provide for optimal utilization of the health personnel in the area; to provide for quality assurance in the delivery of health services throughout the area; to assist area institutions to seek out and recruit area residents, especially women, minority groups, and the disadvantaged, to assure them equal opportunity in health training and employment; to assist in long-range health manpower and service planning so that evolving training programs relate to the health service delivery needs and forms of the future; to improve utilization of the health resources of the area by consumers.

GEOGRAPHIC AREA SERVED

Statewide and 2 counties in South Carolina. Regional AHEC Centers located in: Charlotte, Asheville, Greenville, Fayetteville, Raleigh, Health Planning Area L, Wilmington, Greensboro and Northwest Planning Area.

ORGANIZATIONAL STRUCTURE

Incorporated Health Science Center representing nine regional hospitals or educational foundations; see narrative for additional information.

FUNDING SOURCE (Operating Funds)	AMOUNT	1972-73	1973-74	1974-75	1975-76
BHM*		2,817,269		1,834,359	1,969,532
State**		944,279	1,172,553	5,673,720	8,255,238
Local***					

---

*BHM directly funds three AHEC sites and provides supportive funds for the statewide system.

**The State provides direct funding of operations for statewide system. An additional $23,500,000 in State funds has been appropriated for a one time capital construction program in the AHEC Site locations.

***Information on amounts of local fundings is unavailable at this time. Local funding includes both operational funds and in-kind services.

AREA HEALTH EDUCATION CENTERS PROGRAM OF NORTH CAROLINA, INC.–Continued

GOALS AND PURPOSES

To improve linkages between educational institutions, hospitals, health agencies and practitioners to allow for decentralized education in medicine, dentistry, pharmacy, and public health, regionalized education in nursing and allied health, and regionalized continuing education; to demonstrate opportunities in community practice to university health science students and house staff; to enrich the medical center curriculum in primary care training; to translate new knowledge in patient care to practitioners and support personnel of all types through continuing education and exposure to students and house staff; and to improve the geographic distribution, specialty distribution and retention of health manpower by improving the professional environment of the region.

PARTICIPANTS (Total AHEC Program: Both State and Federal Funding)

I. *Subcontracts* with the AHEC Program Director

A. University of North Carolina Chapel Hill Schools of Nursing, Public Health, Pharmacy, Dentistry, Office of Medical Studies, Health Services Research Center, Health Sciences Library, and Clinical Departments of the Medical School

B. Duke University Medical Center

C. Bowman Gray School of Medicine

D. AHEC Corporations in the following hospitals:

1. Asheville: Memorial Mission Hospital, St. Joseph's Hospital
2. Northwest: Prime affiliation with Bowman Gray School of Medicine; additional affiliations with Watauga County Hospital, Catawba Memorial Hospital, Rowan Memorial Hospital
3. Charlotte: Charlotte Memorial Hospital
4. Greensboro: Moses Cone Hospital
5. Fayetteville: Cumberland County Hospital System, Fayetteville Veterans Administration Hospital
6. Raleigh: Wake Memorial Hospital
7. Wilmington: New Hanover Memorial Hospital
8. Planning Area L: Edgecombe General Hospital, Nash General Hospital, Halifax Memorial Hospital, Wilson Memorial Hospital
9. Eastern: Craven County Hospital, Lenois Memorial Hospital, Pitt County Memorial Hospital, Wayne County Memorial Hospital, Albermarle Hospital, Beaufort County Hospital, Carteret County General Hospital, Chowan Hospital, Onslow Memorial Hospital, Roanoke-Chowan Hospital, Bertie County Memorial Hospital, Martin General Hospital Unit, Pungo District Hospital, Columbia Memorial Hospital, Sea Level Hospital, Washington County Hospital

II. *Subcontracts* Between AHEC Corporations and Community Institutions

There are a variety of subcontracts between the AHEC corporations and community educational institutions such as universities, community colleges, and technical institutes, as well as with community health service institutions such as smaller hospitals, health departments, and mental health centers. Each of these subcontracts relates to specific program activities and involves budgetary support by the AHEC.

PARTICIPANTS–Continued

III. *Affiliations* Between AHEC Corporations and Community Institutions

There are multiple affiliations between each of the AHECs and a variety of community educational institutions, health service institutions, and voluntary health agencies in support of the total AHEC program. These affiliations do not involve direct transfer to AHEC funds to the affiliated institutions.

MAJOR CLINICAL EDUCATION CATEGORIES

Clinical Placements: Students enrolled for the M.D. degree are using the AHECs for 3rd Year Clinical Clerkships and 4th Year Internships in a variety of medical areas; and Rotating Residency Programs in a variety of medical areas also operate from the University Medical Centers to AHEC settings.

Rotations: Students enrolled in the following programs participate in scheduled rotations in AHEC settings: Dentistry, Public Health, Nursing, Pharmacy, Allied Health. There is also a required one month rotation for 3rd Year students (University of North Carolina, Chapel Hill) to the AHECs for Internal Medicine and a required 4th Year rotation for students in Family Practice.

Family Nurse Practitioner Training Program via the University of North Carolina, Chapel Hill; and, via other academic institutions, the following degrees are conferred:

Two year Allied Health Degree Programs

Four Year Allied Health Degree Programs

Post Graduate Allied Health Degree Programs

Medical Degree Programs

Allied Health Certificate Programs

MAJOR CONTINUING EDUCATION CATEGORIES

The continuing education activities of the North Carolina AHEC Program include technical assistance in the development of continuing education and in-service education programs in local communities as well as actually conducting such programs. The continuing education activities of each AHEC span the spectrum of the types of health manpower. The number and variety of continuing education programs which have actually been conducted are too numerous to catalogue in this inventory.

EASTERN SOUTH DAKOTA COMMUNITY HEALTH EDUCATION SYSTEM

800 East 21st Street
Sioux Falls, South Dakota 57101

Donald Olson, Director

TELEPHONE: (605) 339-8052

REGION: VIII

CLASSIFICATION: Community Based Consortium, Continuing Education and Educational Development Program

DATE OF ORIGIN: August, 1974

HEALTH SCIENCE CENTER: None

GEOGRAPHIC AREA SERVED

13½ counties in eastern South Dakota.

ORGANIZATIONAL STRUCTURE

McKennan Hospital, Sioux Falls, a Non-profit Corporation, serves as the sponsor for Eastern South Dakota CHES. An Advisory Board is selected from within the service area.

FUNDING SOURCE	AMOUNT	1972	1973	1974	1975
South Dakota RMP					39,000

GOALS AND PURPOSES

–To plan, organize, direct and coordinate health manpower educational functions - including basic training, retraining and continuing education - within the service area, and ultimately to improve health care delivery to the residents of that area.
–To maintain a continuing inventory of health manpower needs and resources for the service area.
–To determine educational requirements and to assist in the development of curricula to fill determined needs.
–To overcome maldistribution and over-production of certain skills.
–To tie together piecemeal educational programs to achieve a practical whole.
–To maintain liaison with similar organizations as they develop to achieve inter-area exchange of personnel information, educational materials, instructors, etc.
–To evaluate continually the productivity of the program primarily with respect to improved health care delivery.

Statewide Coordinating Unit

ORGANIZATIONAL STRUCTURE

This is a Program Staff Activity of the South Dakota Regional Medical Program. It serves as the State Coordinating Office for the four CHES projects.

FUNDING SOURCE	AMOUNT	1972	1973	1974	1975
South Dakota RMP					22,000

GOALS AND PURPOSES

- –To promote the development and utilization of health manpower within the State.
- –To provide an equitable opportunity for every South Dakota community to confront the issues of health manpower distribution, development and utilization in health care facilities.
- –To actively seek cooperation of all public and private agencies, organizations and professional associations in South Dakota which have interests and concerns in health care.
- –To promote the concept of regionalization of health services within the State.
- –To determine the needs of health providers and consumers within the State.
- –To provide central coordinating functions for the most effective utilization of education materials, personnel and information.
- –To insure compliance of the four regional CHES units with the directives of South Dakota Regional Medical Program-South Dakota Comprehensive Health Planning Regional Advisory Group and the Director of South Dakota Regional Medical Program.
- –To serve as a resource to each of the four CHES regions.
- –To cooperate with the Medical Education Network in statewide activities of mutual interest.

WESTERN COMMUNITY HEALTH EDUCATION SYSTEM

503½ Sixth Street
Rapid City, South Dakota 57701

Robert H. Miller, Director

TELEPHONE: (605) 348-2037

REGION: VIII

CLASSIFICATION: Community Based Consortium, Continuing Education and Educational Development Program

DATE OF ORIGIN: July, 1974

HEALTH SCIENCE CENTER: None

GEOGRAPHIC AREA SERVED

11 Counties in western South Dakota

ORGANIZATIONAL STRUCTURE

Western CHES is an activity of a non-profit corporation called Western Health Systems, Inc. An Advisory Board is selected from within the service area. Parent Corporation of Western Health Systems, Inc. is an EHSDS.

FUNDING SOURCE	AMOUNT	1972	1973	1974	1975
South Dakota RMP				7-74 thru 6-75 $48,066	

GOALS AND PURPOSES

–The general mission of Western Community Health Education is to identify the needs, and to plan, organize, direct and coordinate health manpower development and utilization functions–including retraining and continuing education–within the W-CHES service area, and ultimately to improve health-care delivery to the residents of that area. A fundamental responsibility of W-CHES is to maintain a continuing inventory of identified health manpower needs and resources for its service area; to overcome maldistribution and over-production of certain skills; to tie together fragmented educational programs to achieve a practical and viable system under the statewide CHES; to maintain liaison with other operational CHES programs; to achieve inter-agency exchange of personnel, information, educational materials, instructors, etc.; and finally, to conduct on-going evaluation of the productiveness and effectiveness of the program, pertinent to improved health-care delivery. Accordingly, the Western Community Health Education System has been instituted to pursue the following primary objectives:

–To utilize the local pool of talent and facilities as a nucleus to educate nurses, aides and other allied health technicians and service personnel, not only for the W-CHES delineated area, but for the other regions adjacent to or nearby which do not have the advantage of similar training.

WESTERN COMMUNITY HEALTH EDUCATION SYSTEM–Continued

GOALS AND PURPOSES–Continued

–To foster and coordinate the development and teaching of health-manpower courses, seminars, lectures, etc., in the various colleges, schools, hospitals, clinics, nursing homes, etc., in the W-CHES zone of service, especially to fill training gaps and to avoid duplication.
–To support and cooperate with the South Dakota Core Curriculum, Career Ladder and Challenge System project for re-training and continuing education for health personnel, ambulance technicians, respiratory therapists and other special technicians who can deliver their services to patients in remote areas by outreach methods: nurses and aides involved in home health care delivery; and to stress preventive health education to all health personnel including service people such as dietitians, janitors, administrative employees, and medical record librarians.
–To monitor and evaluate these activities to insure proper priority allocation, program budgeting and realization of defined goals.

APPENDIX B

AHEC Site Visit Protocol

AHEC SITE VISIT PROTOCOL

Part I - Administration/Management

Contract Persons: Executive Director, Administrative Staff Members

Section A: *Management*

1. Review with the administrator his overall understanding of the AHEC Program:
   a. Name of all participating institutions and organizations.
   b. Date HS/EA - AHEC-type activity was started/founded/organized/incorporated.
   c. Area served by the HS/EA - AHEC-type activity (counties, states, regions or municipalities).
   d. Organization of inter-institutional and/or consortium structure.
   e. Objectives (goals - purposes).
   f. Proper AHEC classification.
2. Discuss with the administrator the following:
   a. Determine composition of Board of Directors and how members were selected.
   b. Determine types of decisions for which the Board is responsible.
   c. Determine the Executive Committee's selection and membership.
   d. Determine process of decision making.
3. Discuss with the administrator the following:
   a. Origin of the HS/EA - AHEC-type activity.
   b. Present state of development.
   c. Major accomplishments.
   d. Future projections.

4. Discuss with the administrator the administrative relationship between the project and the educational providers.

5. Indicate whether there is a mechanism (committee, policy group, etc.) specifically involved with the AHEC program in determining specific educational services/facilities needs; i.e., curriculum committee, planning committee. If so, indicate how often the respective committees meet and what issues they consider.

6. Discuss with the administrator the program planning process and evaluation process of the project; i.e., nature of data base, institutional offerings, coordination, use of management by objectives, etc.

7. Indicate how the project determined its geographical area; i.e., population, service area etc. Determine whether similar programs also claim the same geographical base and/or population.

Section B: *Fiscal*

1. Review the specific funding source and allocations for fiscal years 1972 through 1975.

2. Determine costs per fiscal year per component activity.

3. Determine projected fiscal needs for the project over the next three year period. Indicate the kind of activities requiring projected fiscal needs.

4. Indicate specific problematic areas affected by a potential reduction of funds.

Part II - Education Component

Contact Person: Director of Medical Education, Representatives of Participating Institutions

1. Determine whether the Director of Medical Education is involved in a formal planning process in the determination of AHEC educational activities. Discuss both medical and allied health program offerings. Discuss continuing education offerings.

2. Where there are no existing medical education programs, determine the feasibility of such an initiation. Where the AHEC-type project does not provide training, determine what arrangements exist for this process and if credits are received through other mechanisms.

3. Discuss the following:

   a. present state of development of each of the educational components.

   b. major educational accomplishments.

   c. future projections.

4. Review the following:
    a. institution
    b. specialty
    c. credentials
    d. academic degree
    e. number enrolled in each program as of April 1, 1975.
    f. total number graduated in each program as of April 1, 1975.
5. Determine the major problems involved in course articulation. If courses are non-credit, explain.
6. Determine if the project operates independently or in concert (via a network) with other AHECs, etc., through shared programs, faculty, curriculum, resources, etc.

APPENDIX C
